

Self aligning and Correction Device **CENTER MASTER**

Center Master compensates for errors (position and/or angular) occurring during the assembly of various precision parts which are pressed or loose fitted into the holes. reducing assembly failure, enhances product quality, and shortens the cycle time in production line.

► Principle of correcting inaccurate position

Center Master compensates for positional and/or angular errors which are major causes of poor Press-fit

► Effects of CENTER MASTER

Significantly reduced assembly failure

It compensates for misalignment to significantly reduce assembly failure in loose or press insertion task

Uniform Press-fit quality

Uniformly reduced insertion force dispersion by misalignment compensation, drastically decreasing the defects, noise and vibration

Increased binding force between parts

The binding force between parts increases, because the surface contact density is increased by the misalignment compensation.

Save of lead time

The amount of time required for production processing is decreased since the precise positioning is not required

Cost effectiveness

It Needs only a few peripheral devices, thereby reducing facilities investment cost.

Enhanced operation rate

Reduced errors mean increased operation rate.

Longer life cycle of the assembler

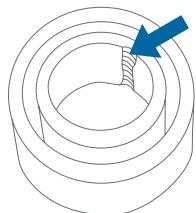

Reduces payload to the rod of the assembly system to prolong its life cycle. (prevents Oil leak and rod distortion)

Easy maintenance

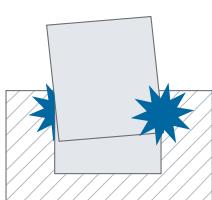

Maintenance work significantly reduced

► Examples of nonconforming insertion process : Resolved with CENTER MASTER

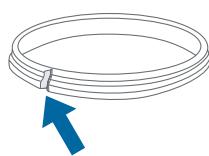

Scratches

Wedging

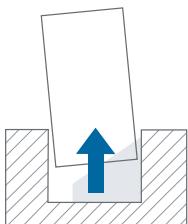

Tearing out

Oil leakages

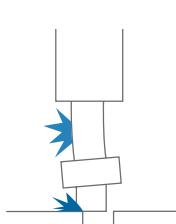

Loose fitting

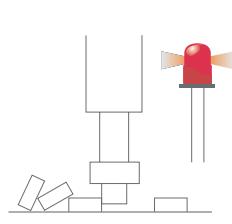

Run-out defects (vibration, noise)

Mechanical damage

Operation Stoppage

► Application

CENTER MASTER Application Case 01

Air conditioner compressor pulley and bearing press fitting

Problem	Improvement
 <p>Scratches and chipping</p> <ul style="list-style-type: none"> Bearing was assembled in skewed position due to center misalignment Internal of pulley is scratched and the chip is accumulated Recalled after 2-month release due to noise / vibration Defect can not be scanned by checking only Press-fit force. 	<p>→</p> <ul style="list-style-type: none"> Cost reduction due to zero bearing defects Protect Bearing damaged by reducing pressing force Reduced noise and vibration Reduced line stops and increased productivity

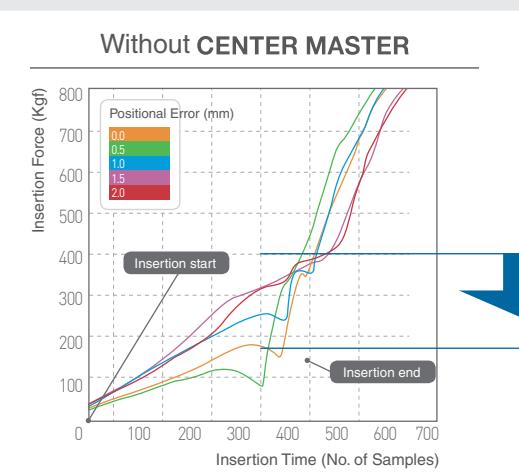

CENTER MASTER Application Case 02

Transmission case and oil seal assembly

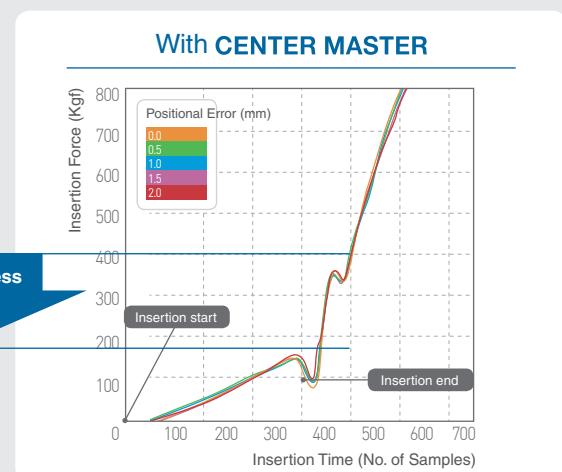

Problem	Improvement
 <ul style="list-style-type: none"> The misalignment of the center point caused by increasing the power of Press-fit resulted in oil seal breakdown and oil leak 	<p>→</p> <ul style="list-style-type: none"> Reduced insertion load ($400 \rightarrow 150\text{kgf}$) -> no oil leakage Uniformed insertion quality Reduced line stops and increased productivity

THE EFFECT OF CENTER MASTER IN PRESS-FIT TASK

(Automatic transmission : press-fit of oil seal)

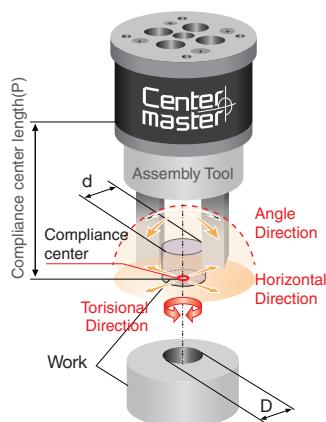

- Maximum insertion force and its dispersion increase along with positional errors
- Quality is uneven; high probability of defects

- Consistent maximum insertion force regardless of positional errors
- Uniform insertion graph
- Low degree of dispersion

► CENTER MASTER LINE UP

Series	B	BS	S	SS	T	TS	A	LA
Position Compensation	○	○	○	○	○	○	○	○
Angular Compensation(Inserting)	(○)	(○)	(○)	(○)	(○)	(○)	○	○
Torsion Compensation	○	○	○	○			○	○
Embedded load cell			○	○				
Torque pressure operation						○	○	
Lock up function for moving assembly								○
Flange Type	○		○		○			
Flangeless Type		○		○		○		

■ **Compliance center length (P)**
The allowable tolerance of the P value is within $\pm 5\text{mm}$. If the P value exceeds the tolerable limit, the compensation function to correct misalignment may not work properly.

■ **Payload**
Payload means the total weight of an assembly tool and a work piece. Improper payload may effect the device's performance or lifetime.

Characteristics of B·BS series and T·TS series

Rotation and Torsion

Rotation only

Lock up function of LA series

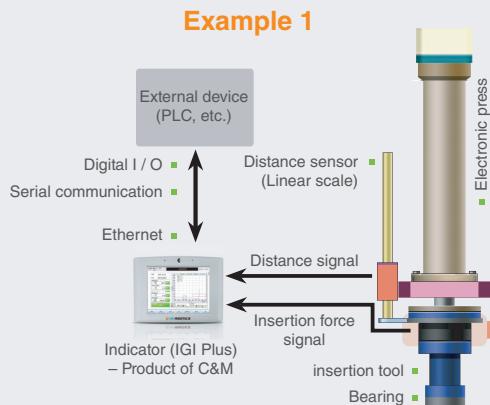

S·SS series with Built-in Load cell function

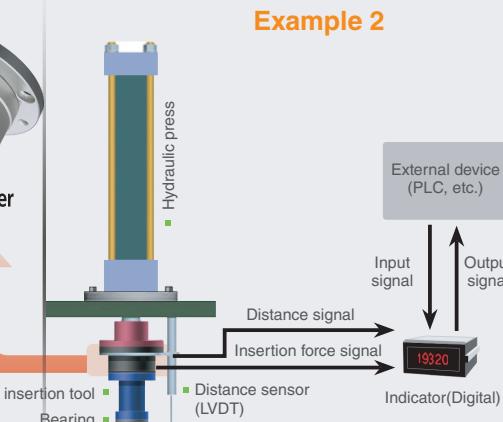

Application example : Bearing Press-fit

-> S·SS Series Center Master with built-in load cell can not only compensate eccentric errors by simple mounting to any hydraulic or electric servo press but also transfer the measured electrical signals to the connected controlling devices via the Indicator in order to monitor insertion quality in real-time. the average value calculated until stopper inside the centering device starts operating

Example 1

Example 2

CENTER MASTER Self-aligning and Correction Device

(1) Model : Custom orders are available.

(2) Elasticity coefficient indicates the elasticity of the compliance center(P) - the average value calculated until stopper inside the centering device starts operating.

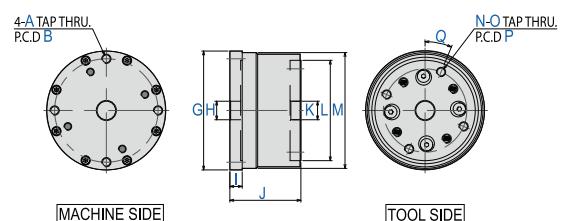

(3) Payload & Allowable maximum force : Please contact us if these values are exceeded.

* Center Master™ compensates maximum ±2mm of positional error, but this value is changed according to the chamfer value.

(1) Model : Custom orders are available.

(2) Elasticity coefficient indicates the elasticity of the compliance center(P) - the average value calculated until stopper inside the centering device starts operating.

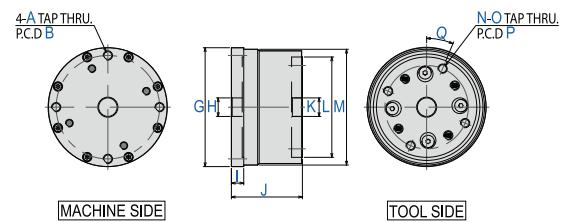

(3) Payload & Allowable maximum force : Please contact us if these values are exceeded.

* Center Master™ compensates maximum ±2mm of positional error, but this value is changed according to the chamfer value.

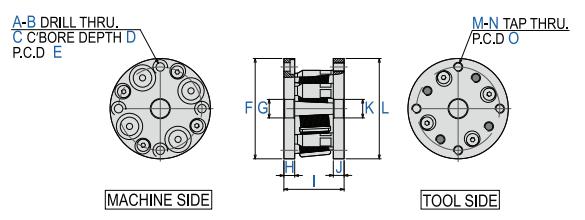

► Electrical Specification for S-SS-Series

Model Name	Refer to the mechanical specification					
Rated Capacity(R.C.)	Refer to the capacity in the mechanical specification					
Rated Output(R.O.)	Refer to each model's detailed specification					
Non-Linearity	< 1.0% R.O.					
Non-Repeatability	< 0.5% R.O.					
Zero Balance	< ±1% R.O.					
Compensated Temp. Range	0~40°C					
Operating Temp. Range	0~70°C					
Temp. Effect on Rated Output	< ±0.1% LOAD/10°C					
Temp. Effect on Zero Balance	< ±0.1% R.O./10°C					
Thermal Resistance, Input/Output	700±10ohms/700±10ohms					
Insulation Resistance (Min.)	2000M ohms/50V DC					
Recommended Excitation Voltage	10V DC					
Cable Length (4 Core, Shielded)	5m (standard)					
Cable Connection	Brown			EXC+		
	Yellow			SIG-		
	White			EXC-		
	Green			SIG+
